

An Overview of Franklin County's 2015 Annual Trending

May 15, 2015

The following steps were taken to conduct the 2015 annual trending in Franklin County:

Step 1: Re-Delineation of Neighborhoods

The vast majority of neighborhoods in Franklin County were completely re-examined and, where necessary, re-delineated for annual trending in 2006. Additional re-delineation of some neighborhoods has occurred each year thereafter as further analysis indicated such action was appropriate.

Step 2: Calculation of New Land Values**

As required in the General Reassessment, new land values were established in July, 2011 and have been implemented since that time. No other changes have been made to the land order since that time, except in the neighborhoods where market data indicated the need for an adjustment.

Step 3: Calculation of New Residential Factors & Residential Studies**

Franklin County implemented the new cost tables from the Department of Local Government Finance. Further, a preliminary ratio study was then conducted for improved residential properties at the township level. This study dictated which property classes required further analysis, stratification, reassessment or calculation of a new neighborhood factor. In some instances, especially in rural areas of Franklin County, the preliminary ratio study indicated that assessments were both accurate and uniform. In other neighborhoods, further review was required. Townships with less than 5 sales were grouped into combined stratum in order to create a sufficient sample size for ratio study calculations. In this case, the townships with less than 5 sales were grouped together by geographic location and similar improvement types, as has been the case historically. Posey, Laurel, Blooming Grove, Salt Creek, Metamora, Ray and Butler Townships comprise a grouping and Fairfield, Bath, Springfield, Highland, and Whitewater Townships are another grouping for improved residential class.

Step 4: Updated Commercial & Industrial Improvement Values**

Franklin County implemented the new cost tables from the Department of Local Government Finance.

****Please note that the period of time from which sales were used for this ratio study was from 1/1/2014 to 2/28/2015. Every attempt was made to ensure a representative sample for each property class. However, given the very low sales activity for vacant residential and vacant commercial property and all industrial property in Franklin County, insufficient usable sales data was yielded even when attempting to expand the sales window back to 2010 for calculating ratio study statistics. 2013 sales were not used in the ratio study (except for improved commercial) because their inclusion did not alter trending factors in any way or increase the available sale pool for those classes with insufficient sales. Those 2013 commercial sales were not time adjusted as values have remained consistent and no adjustment was warranted.**
